CSS frameworks

From Wikipedia, the free encyclopedia

CSS frameworks are pre-prepared [software frameworks](#) that are meant to allow for easier, more standards-compliant [web design](#) using the [Cascading Style Sheets](#) language. Most of these frameworks contain at least a [grid](#). More functional frameworks also come with more features and additional [JavaScript](#) based functions, but are mostly design oriented and [unobtrusive](#). This differentiates these from functional and full [JavaScript frameworks](#).

Some notable and widely used examples are [Bootstrap](#) or [Foundation](#).

CSS frameworks offer different modules and tools:

- [reset style sheet](#)
- [grid](#) especially for [responsive web design](#)
- [web typography](#)
- set of [icons](#) in [sprites](#) or [icon fonts](#)
- styling for [tooltips](#), [buttons](#), elements of forms
- parts of [graphical user interfaces](#) like [accordion](#), [tabs](#), [slideshow](#) or [modal windows](#) ([Lightbox](#))
- equalizer to create equal height content
- often used css helper classes (*left*, *hide*)

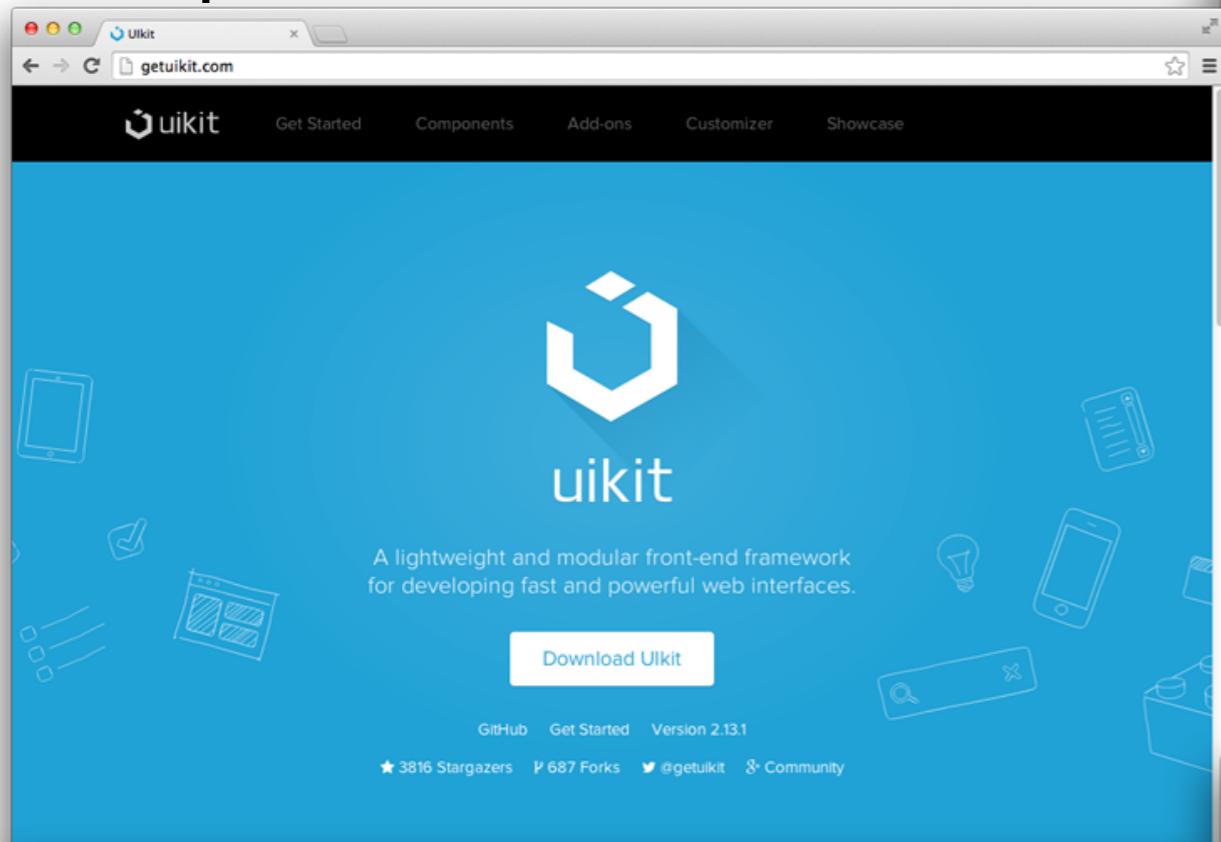

What is a CSS Framework?

“framework is defined as a package made up of a structure of files and folders of standardized code (HTML, CSS, JS etc.) which can be used to support the development of websites, as a basis to start building a site.”

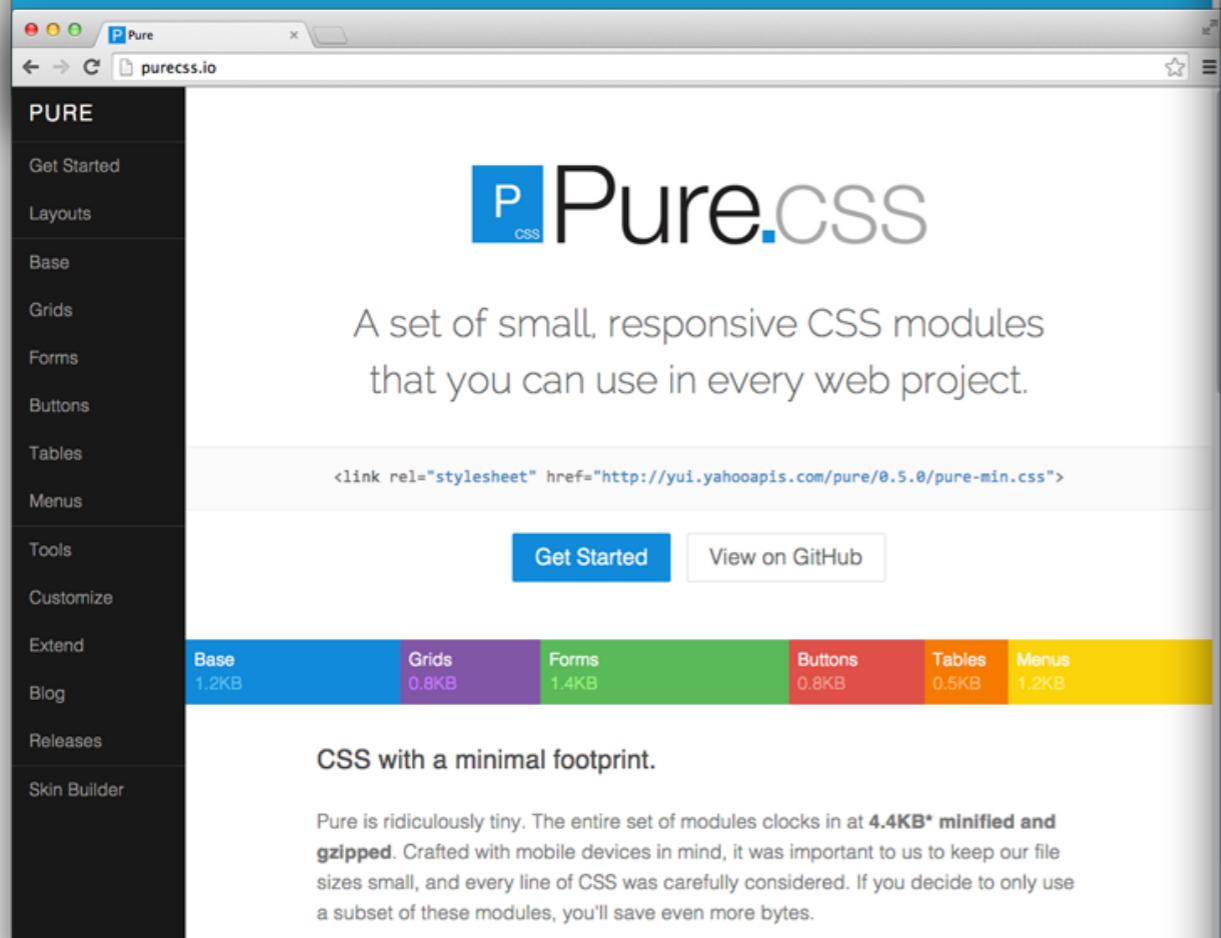

“The aim of frameworks is to provide a common structure so that developers don’t have to redo it from scratch and can reuse the code provided”

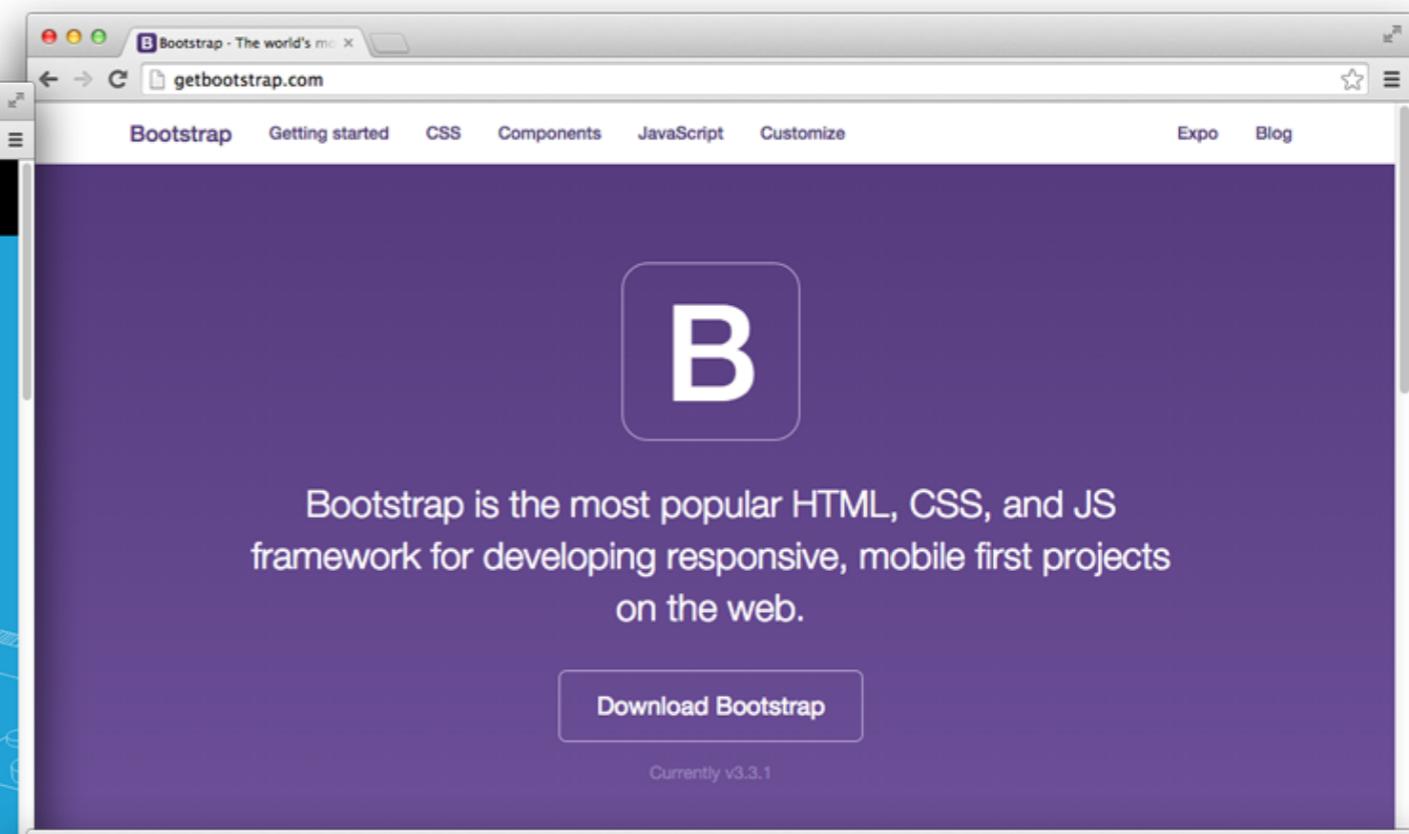

Popular Frameworks

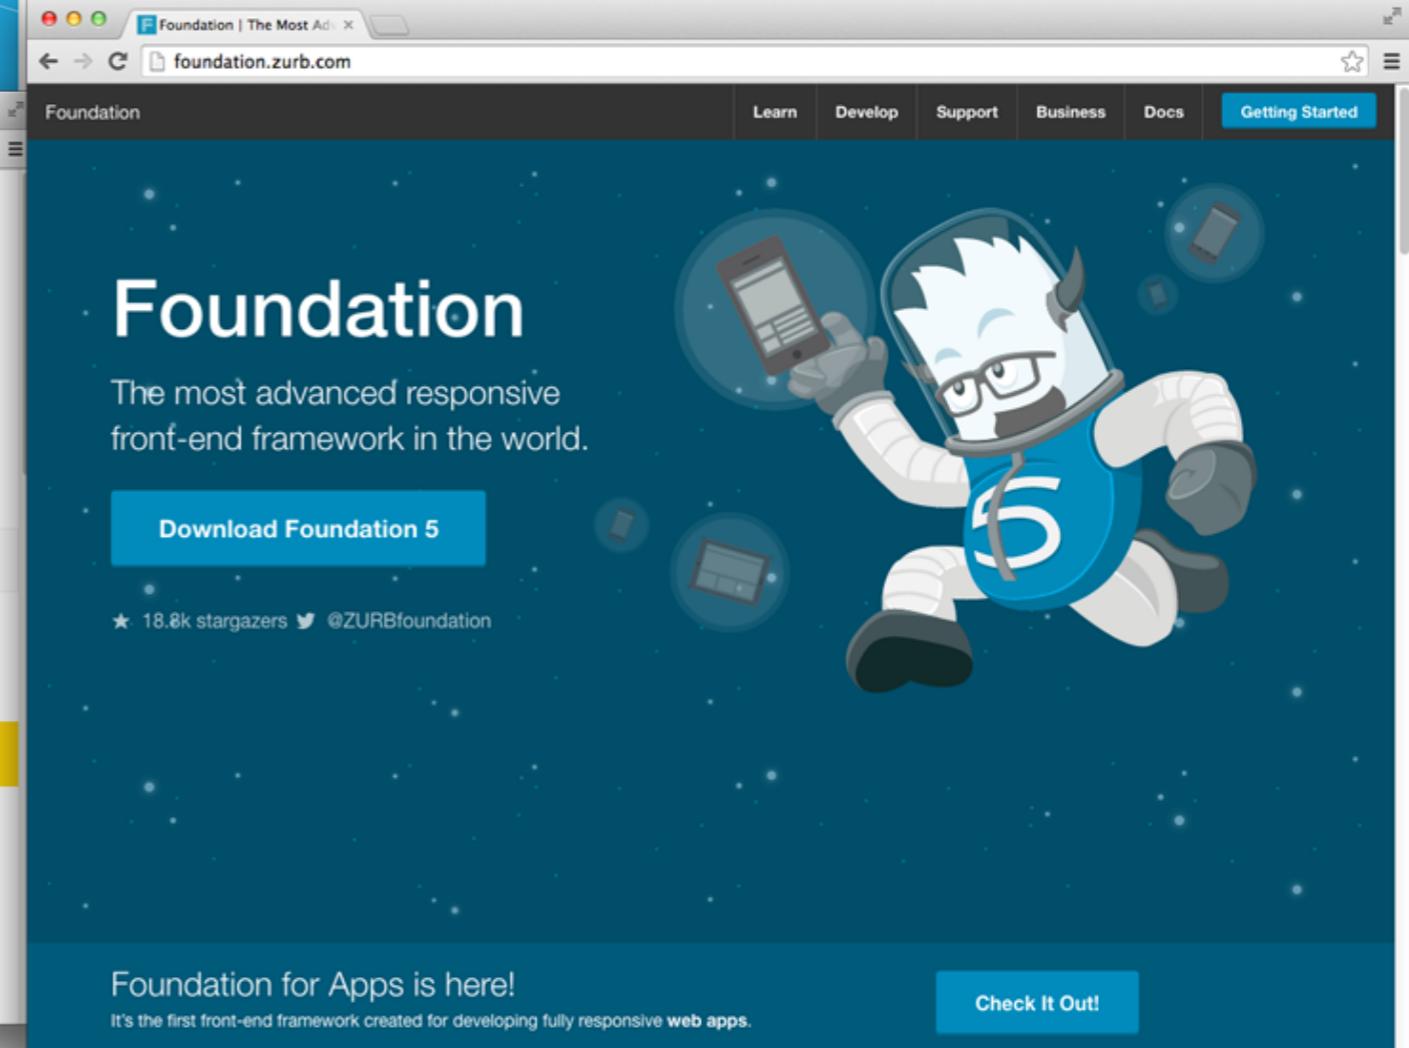

The screenshot shows the UIKit website. It features a blue header with the UIKit logo and navigation links for Get Started, Components, Add-ons, Customizer, and Showcase. The main content area has a blue background with white icons representing various web development tools like mobile phones, tablets, and code editors. The UIKit logo is prominently displayed in the center. Below it, a sub-headline reads: "A lightweight and modular front-end framework for developing fast and powerful web interfaces." A "Download UIKit" button is visible. At the bottom, there's a GitHub link and social media stats: 3816 Stargazers, 687 Forks, and a Twitter handle @getuikit.

The screenshot shows the Pure.css website. It has a dark header with the Pure.css logo and navigation links for Learn, Develop, Support, Business, Docs, and Getting Started. The main content area features a large "Pure.css" logo with a blue "P" icon. Below it, a sub-headline reads: "A set of small, responsive CSS modules that you can use in every web project." A "Get Started" button and a "View on GitHub" button are present. At the bottom, there's a "Base 1.2KB" link and a row of colored buttons for "Grids 0.8KB", "Forms 1.4KB", "Buttons 0.8KB", "Tables 0.5KB", and "Menus 1.2KB". A sub-headline at the bottom states: "CSS with a minimal footprint." and a paragraph explaining the framework's size and mobile focus.

The screenshot shows the Bootstrap website. It has a purple header with navigation links for Bootstrap, Getting started, CSS, Components, JavaScript, and Customize, along with links for Expo and Blog. The main content area features a large white "B" icon in a rounded square. Below it, a sub-headline reads: "Bootstrap is the most popular HTML, CSS, and JS framework for developing responsive, mobile first projects on the web." A "Download Bootstrap" button is visible. At the bottom, it says "Currently v3.3.1".

The screenshot shows the Foundation website. It has a dark teal header with navigation links for Learn, Develop, Support, Business, Docs, and Getting Started. The main content area features a large "Foundation" logo with a cartoon character holding a smartphone. Below it, a sub-headline reads: "The most advanced responsive front-end framework in the world." A "Download Foundation 5" button and a GitHub link ("18.8k stargazers") are present. At the bottom, a sub-headline reads: "Foundation for Apps is here!" and a "Check It Out!" button is visible.

Semantic UI Starter

- Semantic css defines a large number of classes
- Your elements take on Semantic-UI styles by adopting specific classes
- All classes are preceded by “ui” to mark them as part of the framework

class =“ui container”

class =“ui segment”

class=“ui header”

class=“ui image”

class =“ui grid”

class “ui row”

class=“ui column”

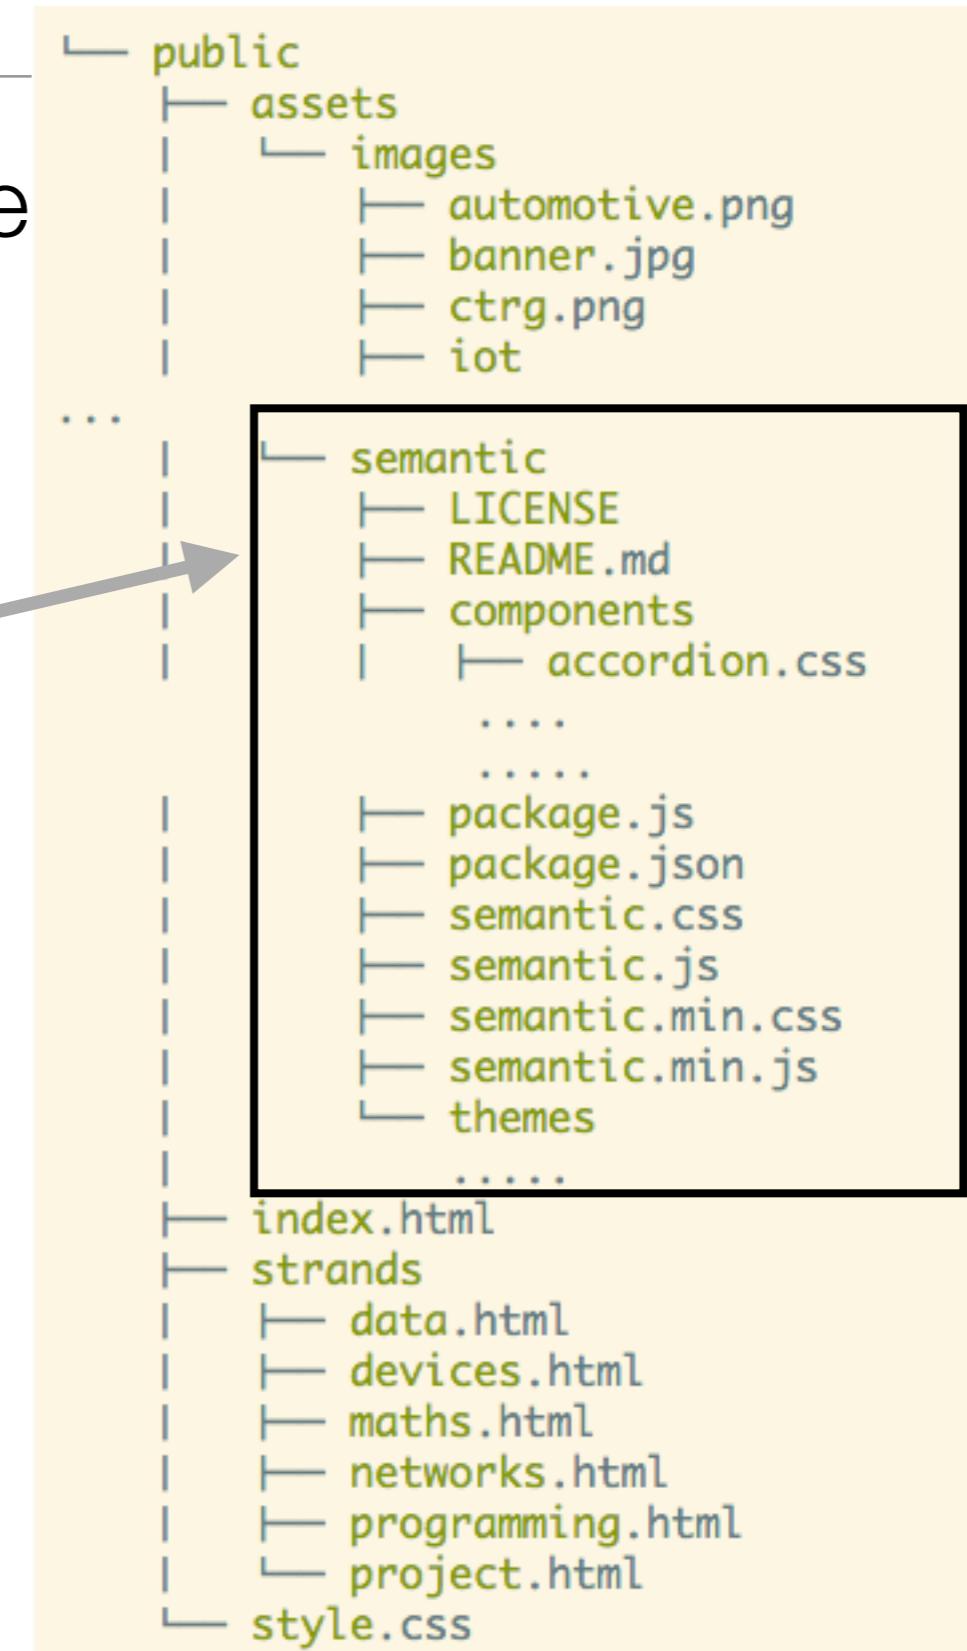

Typical Project Structure

- public

Incorporating Semantic-UI into a project

- Download the semantic-ui archive
- unzip and copy to the assets folder - inside a css folder
- The semantic-ui archive is provided in the lab

First Steps...

```
<head>
  <meta charset="UTF-8">
  <link rel="stylesheet" type="text/css" href="http://fonts.googleapis.com/css?family=Open+Sans"
    <link rel="stylesheet" href="/assets/css/semantic.css">
    <link type="text/css" rel="stylesheet" href="style.css" media="screen"/>
  <title>BSc in the Internet of Things</title>
</head>
```

- Link to the semantic.css stylesheet we have just included.
- This makes most of the Semantic-UI components available to your project

First Steps - remove existing stylesheet

- Delete almost all CSS rules we have built up in the page so far
- Leave just the ‘banner’ rule:

```
.banner {  
background: url("/assets/images/banner.jpg") top center;  
background-position: top center;  
color: white;  
height:300px;  
}

An exciting new level 8 Honours Degree for 2015. Combine Programming and Electronics and learn how to code cool devices, places and things. Be part of the next wave of innovation in Computing

Programming

Learn a broad range of programming and problem solving skills, including exciting new platforms, software tools and languages. Use these skills to build apps for mobile, cloud and device based IoT applications. Evolve a portfolio of fascinating applications.

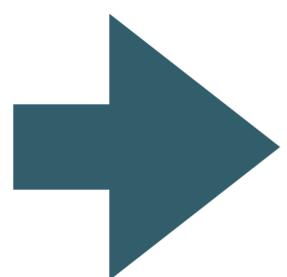

Data Science

At the heart of many IoT applications is data: measurements, events alarms and other information that must be relayed, stored and ultimately turned into knowledge. Learn the fundamentals of modern approaches to data in this strand.

Devices

The 'Things' we connect to are often physical devices. These can range from simple temperature sensors to sophisticated control systems like traffic lights or cameras. Connecting to and interacting with the physical world is the subject of this strand.

margin: auto;

```
#main {  
    width: 600px;  
    margin: 0 auto;  
}
```

CSS

- Setting the width of a block-level element will stop it stretching out to the edges left and right. Then set the margin to auto left and right. This horizontally centres that element within its container.

margin: auto;

 Lorem ipsum dolor sit amet, eos ut diam interesset, cu modo necessitatibus pri. Ne sit elit dicit, eum dico autem convenire an. Sed ei clita nullam, elit legimus voluptatibus ei his. Duo facilisi cotidieque at, invidunt platonem incorrupte ut has.

 Vel et enim consulatu. Te civibus copiosae salutandi vel. Adhuc sonet libris ad eam, mundi affert mea ex. Dicunt feugiat patrioque et mel, id qui nusquam maluisset, ei vim justo ceteros vituperata. Mei saepe mediocrem ut. Repudiare definitiones ea ius, sint commodo est ea, nam no nemore diceret.

ui container

- Replaces the need for “margin:auto” if we are using Semantic-UI

Containers

<http://semantic-ui.com/elements/container.html>

When To Use

A container is an element designed to contain page elements to a reasonable maximum width based on the size of a user's screen. This is useful to couple with other UI elements like [grid](#) or [menu](#) to restrict their width to a reasonable size for display.

Container Sizes

Containers are designed to responsively adjust their maximum width based on the size of the screen they are appearing.

	Mobile	Tablet	Small Monitor	Large Monitor
Width	100%	723px ?	933px ?	1127px ?
Gutter Size	1em	Fluid	Fluid	Fluid
Responsive Visibility	mobile only	tablet only	small monitor only	large monitor only
Device Width	below 768px	768px - 991px	992px - 1200px	above 1200px

ui segment

- Use to group related content
- remove all of the ids and classes currently all files.
- Give the enclosing articles/sections the class "ui segment":

Programming

The IoT requires a new breed of software skills, with an emphasis on flexible, reactive, and highly networked applications and services. This software runs on a diverse range of systems, is frequently connected to cloud services, and may be capable of leveraging large data sets to deliver inferences and decision support in an informed manner. The software is designed and implemented using agile techniques, with an emphasis on test driven development and quality user experiences..
